

TISCALI, SIGNED A PARTNERSHIP WITH ENEL OPEN FIBER FOR IMPLEMENTATION AND MARKETING OF A ULTRA BROADBAND TELECOMMUNICATIONS NETWORK IN ITALY

Tiscali and EOF (Enel Open Fiber): Preliminary agreement for the supply of fiber optic connections on the FTTH network built by Enel Open Fiber and to provide Tiscali users with network access performance up to 1 Gigabit per second.

Cagliari, 20 July 2016 - Tiscali, one of the leading telecommunications company in Italy, and Enel Open Fiber, a companies of the ENEL group created for the infrastructure construction of the fiber optic network in Italy, announce that they have signed today an agreement for the provision of end-to-end connections for access to the fiber optic network FTTH (fiber to the Home) built by Enel Open fiber. In this way, the two groups intend to launch a partnership for the development and commercialization of a ultra broadband telecommunications network in Italy.

*The agreement with Enel Open Fiber has a significant strategic value because it complements the existing plan of the 4G LTE Fixed Wireless Access Network that Tiscali has begun to implement. Thanks to this agreement with Enel Open Fiber Tiscali will indeed deliver ultra-broadband services in Italy by using both the 4G LTE Fixed Wireless solution in Digital Divide areas and the FTTH network in Enel Open Fiber elsewhere, ensuring our users access network performance up to 1 Gigabit per second." Said **Riccardo Ruggiero, CEO at Tiscali***

The agreement is in line with the Italian plan for the ultra broadband promoted by the Presidency of the Council of Ministers and the European Digital Agenda 2020, and pursues the Italian strategy for ultra broadband presented in March 2015. In relation to the plan, EOF will build up an ultra broadband telecommunications network in FTTH mode in areas not of market failure with the aim of serve municipalities selected with infrastructures and then reach a coverage equal to '80% of the units in each municipality.

Tiscali is part of this Italian strategy also through this partnership signed today, by marketing its product in FTTH mode on the network built by EOF starting from the municipalities of Venice, Catania, Cagliari, Naples, Perugia, Genoa, Palermo, Florence, Padua, and with the aim of extending the supply to the municipalities in which the same network will be developed.
